

# Plastic Slab Bolster

Rebar Accessories

## Technical Data Sheet

### Description:

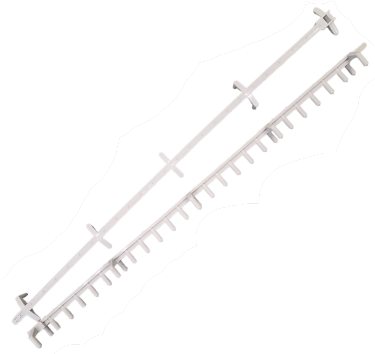

Plastic Slab Bolsters consist of a 30" section of rebar support made for composite material with interlocking ends for joining two or more sections together to create a continuous length of beam bolster.

### Application:

Plastic Slab Bolsters are used to support and provide proper cover for rebar in elevated slabs, tilt-walls, precast, post tension, parking garage decks and as a side form spacer.

### Product Specifications:

- 30" lengths
- Available in a variety of heights (3/4", 1", 1 1/4", 1 1/2", 1 3/4", 2", 2 1/4", 2 1/2", 2 3/4", 3")
