

# Plastic Slab Bolster Upper

Rebar Accessories

## Technical Data Sheet

### Description:

Plastic Slab Bolster Uppers consist of a 30" section of rebar support made for composite material with interlocking ends for joining two or more sections together to create a continuous length of beam bolster.

### Application:

Plastic Slab Bolster Uppers are used to support and provide proper cover for rebar in the same environments as Plastic Slab Bolsters. However, they also allow for support in the top layer in double mat application and allow for better support in corrugated decking.

### Product Specifications:

- 30" lengths
- Available in a variety of heights (1", 1½", 2", 2½", 3", 4")

### Benefits:

- No metal to rust or stain concrete
- High load strength
- Impact resistant
- Snap locking system
